Introduction

Paragraph Tools is a FrameMaker plug-in that provides additional capabilities for working with paragraphs in FrameMaker documents. Capabilities include listing paragraph tag usage, removing unused paragraph tags, re-mapping paragraph tags, and locating and removing paragraph tag overrides.

Requirements

To use the Paragraph Tools plug-in, you must be using FrameMaker version 6.0 or later. The plug-in is available for the following platforms:

- Windows
- Macintosh

Installation

To install the Paragraph Tools plug-in, perform the steps for the platform you are using.

Windows

Perform the following steps to install Paragraph Tools for Windows:

1. Copy the appropriate version of the ParagraphTools.dll into the \fminit\PlugIns directory that is located in the directory where FrameMaker is installed.

   To install the plug-in, you will need to have file system permission to write to the PlugIns directory. For Windows XP and earlier, this means being logged into the system as a member of the Administrator or Power User groups. For Windows Vista with User Account Control (UAC) this means providing Administrator credentials when you copy the DLL file into the directory.

2. Restart FrameMaker.
Macintosh
Perform the following steps to install Paragraph Tools for the Macintosh:
1  Copy the appropriate version of the ParagraphTools file to the Modules folder. This folder is located in the folder where FrameMaker is installed.
2  Restart FrameMaker.

Removal
To remove Paragraph Tools, close FrameMaker if it is running. Remove the files you added when you installed the plug-in, and then restart FrameMaker.

Backup warning
Paragraph Tools can significantly alter your FrameMaker documents. It is strongly suggested that you make a complete backup of your Frame documents before using Paragraph Tools.

Shareware notice
Paragraph Tools has been released as shareware. If you find the plug-in useful, please pay the shareware fee. The $10 cost is minimal, given the capabilities that Paragraph Tools provides. Paying the shareware fee also encourages development of other tools like Paragraph Tools.

Redistributing Paragraph Tools
Paragraph Tools is shareware. You may redistribute the Paragraph Tools package with the following restrictions:
• You may not alter the software.
• You must distribute the entire package.
• You may not charge a fee for redistributing Paragraph Tools.

Problem reports and suggestions
If you find any problems with the Paragraph Tools plug-in, or if you have any suggestions for future enhancements, e-mail them to:
support@siliconprairiesoftware.com
Chapter 1
Paragraph Usage

Several tools are available to list which paragraphs are used or unused in FrameMaker files. This chapter is divided into the following sections:

- List Paragraph Usage
- Delete Unused Paragraph Tags
- Create Paragraph Tag List
- Remove Non-list Paragraph Tags

List Paragraph Usage

The List Paragraph Usage routine produces a FrameMaker document that lists how all the paragraph tags in a document or book are used. To use the routine, complete the following procedure:

1. **Open a document or book.**
2. **Start the routine.**

   In the Tools menu, point to Paragraphs and then choose List Paragraph Usage. A report will be produced that lists the paragraph tags in use, as well as those that aren’t used in the document or book.

   For books, you can choose the List Paragraph Usage - Individual command to list each document individually. The paragraph usage for each document in the book will be listed separately, rather than as a combined list for the entire book.

   You can also choose the List Paragraph Usage - By Tag command to list each paragraph tag and the documents in the book that use that tag. This is a two-pass operation, so it will take longer to complete.
A sample paragraph usage report is shown in the following illustration:

Delete Unused Paragraph Tags

The Delete Unused Paragraph Tags routine will find out which paragraph tags are not used in the current FrameMaker document or book, and then remove them. This can be useful if you want to cleanse documents of paragraph tags that aren’t used.

To use the routine, complete the following procedure:

1. Open a document or book.
2. List how paragraph tags are used (optional).
   Before deleting unused paragraph tags, you may want to use the List Paragraph Usage routine to find out how paragraph tags are used. The tags appearing in the “Paragraph Tags Not Used” list will be deleted by the Delete Unused Paragraph Tags routine.
3. Start the routine.
   In the Tools menu, point to Paragraphs and then choose Delete Unused Paragraph Tags.
4. Verify that you want to continue.
   A dialog will be displayed that verifies you want to delete unused paragraph tags. If you’re certain you want to continue, click OK. Unused paragraph tags will be removed from the current file, or from all files in the current book.
Create Paragraph Tag List

In some of your FrameMaker documents, specific paragraph tags may not be used, but you would like them to remain available. Because they aren’t used, the Delete Unused Paragraph Tags routine would remove them from the document. To avoid this problem, Paragraph Tools allows you to create a list of paragraph tags that you want to keep. Any paragraph tags that don’t appear in the list of tags to keep will be removed from the active document or book. A list of paragraph tags to keep is shown in the following illustration:

The Create Paragraph Tag List routine provides an easy way to create the list of paragraph tags you want to keep. It can create an empty list of tags, or create a list that contains the tags used, or all tags in the current document or book.

To use the routine, complete the following procedure:

1. **Open a document or book.**
2. **Start the routine.**
   In the Tools menu, point to Paragraphs and then choose Create Paragraph Tag List.
3. **Select the type of list to produce.**
   A dialog will be displayed, prompting you for the type of list to create. You can produce an empty tag list, or the tag list can contain the used tags, or all tags in the active document or book.
4. **Edit the tag list.**
   Once you have generated the tag list, remove those tags that you don’t want to have appear in your FrameMaker documents. You may also need to add paragraph tags to the list if they weren’t used in the documents from which the tag list was constructed.
5 Save the paragraph tag list (optional).
Typically, you will create one paragraph tag list that contains all of the paragraph tags you use for a set of FrameMaker templates. Save this tag list with an appropriate name so you can easily associate it with a set of templates. You will use the tag list when you use the Remove Non-list Paragraph Tags routine.

Remove Non-list Paragraph Tags
The Remove Non-List Paragraph Tags routine examines a paragraph tag list, and then looks at the current document or book to remove all of the paragraph tags that don’t appear in the list. Before you use this routine, be sure you’ve created a paragraph tag list that indicates which paragraph tags you want to keep.

To use the routine, complete the following procedure:

1 Open a paragraph tag list document.
This is a document you created with the Create Paragraph Tag List routine, and lists all of the paragraph tags you want to keep.

2 Open a document or book.
The document or book should be active. The paragraph tag list must remain open in the background.

3 Start the routine.
In the Tools menu, point to Paragraphs and then choose Remove Non-list Paragraph Tags.

4 Verify that you want to continue.
A dialog will be displayed, asking you to verify that you want to keep only the paragraph tags listed. If you’re certain you want to continue, click OK. Any paragraph tags that don’t appear on the list will be removed from the current file, or from all files in the current book.

Only the paragraph tags are deleted. If a document contains a paragraph that uses a tag that was deleted, the paragraph will still remain in the document.
Chapter 2
Paragraph Conversion

Paragraph Tools contains routines that will convert paragraphs using a specific paragraph tag to another paragraph tag. This can be useful when converting from one set of templates to another. This chapter is divided into the following sections:

- Create Conversion Document
- Convert Paragraphs

Create Conversion Document

If you want to change the paragraph tag applied to paragraphs throughout a FrameMaker document, you could use Frame’s search-and-replace operation. This would be a time-consuming process. Paragraph Tools allows you to create a list of paragraph tags and the tag you would like to convert them to. Paragraph Tools will use the conversion document to convert the paragraphs in the current document or book. A paragraph tag conversion document is shown in the following illustration:
The Create Conversion Document routine provides an easy way to create the list of paragraph tags you want to convert. It can create an empty list of tags, or create a list that contains the tags used, or all tags in the current document or book.

To use the routine, complete the following procedure:

1. **Open a document or book.**
2. **Start the routine.**
   In the Tools menu, point to Paragraphs and then choose Create Conversion Document.
3. **Select the type of list to produce.**
   A dialog will be displayed, prompting you for the type of list to create. You can produce an empty tag list, or the tag list can contain the used tags, or all tags in the active document or book.
4. **Edit the tag list.**
   Once you have generated the tag list, specify the new paragraph tag values for the paragraphs you want to convert. For example, if you wanted to convert all paragraphs tagged “Illo” to “Illustration”, you would enter “Illustration” into the corresponding cell in the Destination Tag column. You may also need to add paragraph tags to the Source Tag column if they weren’t used in the documents from which the tag list was constructed.

   It’s not necessary to fill all of the cells in the Destination Tag column. If you leave a cell empty, no conversion will occur for the paragraph tag listed in the Source Tag column.  

   *Be sure you type the paragraph tag names carefully. If the paragraph tag names don’t match exactly, they won’t be converted. Be sure the names don’t contain trailing spaces.*

5. **Save the conversion document (optional).**
   Typically, you will create one paragraph conversion list that contains all of the paragraph tags you want to convert for a set of FrameMaker templates. Save this conversion document with an appropriate name so you can easily associate it with a set of templates. You will use the conversion document when you use the Convert Paragraphs routine.
**Convert Paragraphs**

The Convert Paragraphs routine examines a conversion list, and then converts the paragraph tags all of the paragraph in the current document or book. Before you use this routine, be sure you’ve created a conversion list that indicates how you want to convert paragraph tags.

To use the routine, complete the following procedure:

1. **Open a paragraph tag conversion document.**
   This is a document you created with the Create Conversion Document routine, and lists the paragraph tags you want to convert.

2. **Open a document or book.**
   The document or book should be active. The paragraph conversion document must remain open in the background.

3. **Start the routine.**
   In the Tools menu, point to Paragraphs and then choose Convert Paragraphs.

4. **Verify that you want to continue.**
   A dialog will be displayed, asking you to verify that you want to convert paragraph tags. If you’re certain you want to continue, click OK. Any paragraph tags listed in the Source Tag column will have the corresponding Destination Tag applied to them. If the Destination Tag column doesn’t contain a value, or contains a tag that doesn’t exist in the document being converted, the paragraph will be left as it was found.

5. **Check the conversion results.**
   Check the current document or a document in the current book to verify the results of the conversion. If paragraph tags were not converted, be sure that the target paragraph tags exist in each of the Frame documents. Paragraph Tools doesn’t rename paragraph tags. It re-maps paragraphs to paragraph tags that are already in each Frame document.

*After you have converted the paragraphs for a document, you may want to use the Delete Unused Paragraph Tags or Remove Non-list Paragraph Tags routines to remove the unused tags.*
Chapter 3
Paragraph Tag Overrides

One of FrameMaker’s strengths is its ability to create documents with consistent formatting. However, it’s easy to add “overrides” to a paragraph’s formatting, which can make managing and updating documents difficult. Paragraph Tools contains routines that allow you to easily locate and remove paragraph overrides. This chapter is divided into the following sections:

- Remove Overrides
- Find Next Override

Remove Overrides

The Remove Overrides routine will automatically remove the overrides from any paragraph in the current document or all files in the current book. It does this by re-applying the paragraph tag to any paragraph that has an override.

To use the routine, complete the following procedure:

1. **Open a document or book.**
2. **Start the routine.**
   
   In the Tools menu, point to Paragraphs and then choose Remove Overrides.
3. **Verify that you want to continue.**
   
   A dialog will be displayed, asking you to verify that you want to remove the overrides from the paragraphs in the current document or book. If you’re certain you want to continue, click OK. Any paragraphs that have an override will have the paragraph tag re-applied, which will remove the override.
Find Next Override

You may want to find which paragraphs in a document actually contain overrides. The Find Next Override routine provides this capability.

Overrides in document flows

To find the overrides in the flows of a document, open the document. Place the insertion point at the beginning of the document. In the Tools menu, point to Paragraphs and choose Find Next Override. If there is a paragraph that contains an override, the insertion point will be moved to it. To find the next override, choose Find Next Override again. When the end of the document is reached, the following message is displayed:

You can find the next override in a document by typing Esc-o-v.

Overrides in tables

To find the overrides in a table, open the document. Place the insertion point in the first cell of the table. In the Tools menu, point to Paragraphs and choose Find Next Override. If there is a paragraph in the table that contains an override, the insertion point will be moved to it. To find the next override in the table, choose Find Next Override again. When the end of the table is reached, the following message is displayed:
Chapter 4
Paragraph Tag Report

Paragraph formats for FrameMaker documents have numerous characteristics. You can use the Paragraph Tag Report to generate a list of the characteristics of all the paragraph formats in the current document.

To use this routine, complete the following procedure

1 Open a document.
2 Start the routine.
   In the Tools menu, point to Paragraphs and then point to Generate Paragraph Tag Report. If you choose All Tags, a report will be produced that lists the characteristics of all the paragraph tags in the document. If you choose Selected Tag, a list of the tags in the document will be displayed. Select one and click OK to generate the report for that tag.

The following is a portion of a paragraph tag report. It shows the characteristics of the HeadRun-in character format.

**HeadRun-in**

**Default Font**
Capitalization: Normal
Change Bar: False
Color: Black
Font Family: Univers 55
Font Angle: Regular
Font Size: 10.00 points

Appendix A
Command Reference

Only one keyboard shortcut has been defined in Paragraph Tools. If you want to create additional keyboard shortcuts, this appendix contains a list of the names for each command.

Command reference

The following commands are defined in Paragraph Tools for the document-level operations:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ListParagraphUsage</td>
<td>Lists how paragraphs are used in the current document.</td>
</tr>
<tr>
<td>DeleteUnusedParagraphs</td>
<td>Deletes unused paragraphs from the current document.</td>
</tr>
<tr>
<td>CreateParagraphList</td>
<td>Creates a paragraph tag list, based on the current document.</td>
</tr>
<tr>
<td>RemoveNonlistParagraphs</td>
<td>Removes paragraph tags from the current document that aren’t found in a paragraph tag list.</td>
</tr>
<tr>
<td>CreateConversionDocument</td>
<td>Creates a paragraph conversion document, based on the current document.</td>
</tr>
<tr>
<td>ConvertParagraphsInDoc</td>
<td>Converts the paragraph tags in the current document, based on the paragraph conversion document.</td>
</tr>
<tr>
<td>Command</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>RemoveOverrides</td>
<td>Removes all overrides from paragraphs in the current document.</td>
</tr>
<tr>
<td>FindNextOverride</td>
<td>Locates the next paragraph containing an override in the current text flow or table.</td>
</tr>
<tr>
<td>GenerateParagraphTagReport</td>
<td>Generates a report of the paragraph tags in the current document.</td>
</tr>
</tbody>
</table>

The following commands are defined in Paragraph Tools for the book-level operations:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ListParagraphUsageBook</td>
<td>Lists how paragraphs are used in the current book.</td>
</tr>
<tr>
<td>ListParagraphUsageBookIndFiles</td>
<td>Lists paragraph usage for individual files in the current book.</td>
</tr>
<tr>
<td>DeleteUnusedParagraphsBook</td>
<td>Deletes unused paragraphs from all files in the current book.</td>
</tr>
<tr>
<td>CreateParagraphListBook</td>
<td>Creates a paragraph tag list, based on documents in the current book.</td>
</tr>
<tr>
<td>RemoveNonlistParagraphsBook</td>
<td>Removes paragraph tags from each file in the current book that aren’t found in a paragraph tag list.</td>
</tr>
<tr>
<td>CreateConversionDocumentBook</td>
<td>Creates a paragraph conversion document, based on all files in the current book.</td>
</tr>
<tr>
<td>ConvertParagraphsBook</td>
<td>Converts the paragraph tags in all documents in the current book, based on the paragraph conversion document.</td>
</tr>
<tr>
<td>RemoveOverridesBook</td>
<td>Removes all overrides from paragraphs for all of the files in the current book.</td>
</tr>
</tbody>
</table>
The following miscellaneous command is defined in Paragraph Tools:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ParaToolsAbout</td>
<td>Displays the About dialog</td>
</tr>
</tbody>
</table>

**Modifying a shortcut**

You can use a FrameMaker customization file to add or modify a shortcut for any of the commands in Paragraph Tools. For example, the following lines from the “Customui.cfg” file specify that the F1 key will remove overrides from all paragraphs in the current document. Notice the command value came from the tables in the previous section.

```xml
<Command RemoveOverrides>
    <Label RemoveOverrides/>
    <KeySequence /F1>
    <Definition \x1000>>
</Command>
```

Refer to the Customizing FrameMaker online manual for more information about creating and using a customization file to add or change FrameMaker shortcuts.
Paragraph Tools produces several output files, such as the Paragraph Usage report. By default, these new documents are based on the default document for your FrameMaker installation. The routines in Paragraph Tools expect certain paragraph and paragraph formats to be in this default document.

If you have modified the default document for your FrameMaker installation, it may not have the formats needed by Paragraph Tools. If this occurs, copy the SPOutput.fm template document included with Paragraph Tools to your FrameMaker installation.

- On Windows, place the SPOutput.fm document in the \FrameMaker\fminit\ folder for the FrameMaker installation.
- On the Macintosh, place the SPOutput.fm document in the Modules folder for the FrameMaker installation.

When Paragraph Tools creates an output document, it will use this SPOutput.fm document as the source template.

*If you want to customize the output from Paragraph Tools, you can do this in the SPOutput.fm document. Every output file created will use the modified characteristics you added to the SPOutput.fm document.*
Paragraph Tools can be controlled with standard FrameMaker scripting tools, including the Frame Developer’s Kit (FDK) and FrameScript.

**Scriptable commands**

The following commands can be accessed through scripting for both FrameScript and the FDK:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ParaToolsAbout</td>
<td>Displays the About dialog.</td>
</tr>
<tr>
<td>ListParagraphUsage</td>
<td>Creates a document that lists paragraph usage for the current document.</td>
</tr>
<tr>
<td>ListParagraphUsageBook</td>
<td>Creates a document that lists paragraph usage for the current book.</td>
</tr>
<tr>
<td>ListParagraphUsageBookIndividual</td>
<td>Creates a document that lists the paragraph usage for each document in the current book individually.</td>
</tr>
<tr>
<td>ListParagraphUsageBookByTag</td>
<td>Creates a document that lists each paragraph tag used in a book, and the corresponding documents that use that tag.</td>
</tr>
<tr>
<td>DeleteUnusedParagraphs</td>
<td>Deletes unused paragraph tags from the current document.</td>
</tr>
<tr>
<td>DeleteUnusedParagraphsBook</td>
<td>Deletes unused paragraph tags from all documents in the current book.</td>
</tr>
<tr>
<td>Command</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>CreateParagraphList</td>
<td>Creates a paragraph list based on the current document.</td>
</tr>
<tr>
<td>CreateParagraphListBook</td>
<td>Creates a paragraph list based on the documents in the current book.</td>
</tr>
<tr>
<td>CreateConversionDocument</td>
<td>Creates a conversion document based on the current document.</td>
</tr>
<tr>
<td>CreateConversionDocumentBook</td>
<td>Creates a conversion document based on the documents in the current book.</td>
</tr>
<tr>
<td>RemoveNonlistParagraphs</td>
<td>Removes the paragraph tags from the current document that are not in the paragraph list.</td>
</tr>
<tr>
<td>RemoveNonlistParagraphsBook</td>
<td>Removes the paragraph tags from the documents in the current book that are not in the paragraph list.</td>
</tr>
<tr>
<td>ConvertParagraphsDoc</td>
<td>Converts the paragraphs in the current document.</td>
</tr>
<tr>
<td>ConvertParagraphsBook</td>
<td>Converts the paragraphs in the documents in the current book.</td>
</tr>
<tr>
<td>RemoveOverrides</td>
<td>Removes paragraph overrides from the current document.</td>
</tr>
<tr>
<td>RemoveOverridesBook</td>
<td>Removes paragraph overrides from all documents in the current book.</td>
</tr>
<tr>
<td>FindNextOverride</td>
<td>Finds the next paragraph override in the current document or table.</td>
</tr>
<tr>
<td>GenerateParagraphTagReport</td>
<td>Generates a paragraph tag report for the current document.</td>
</tr>
<tr>
<td>SetDocId</td>
<td>Specifies the ID of the document to be acted on.</td>
</tr>
<tr>
<td>SetBookId</td>
<td>Specifies the ID of the book to be acted on.</td>
</tr>
</tbody>
</table>
Client name

For scripting commands to work properly, you must specify the name of the plug-in you want to access. The name depends on the platform on which you are using FrameMaker.

Windows

For Windows, the Paragraph Tools plug-in is named “Paragraph Tools”. This is the client name that was given to the plug-in when it was created.

Macintosh

For the Macintosh, the Paragraph Tools plug-in is named “ParagraphTools”. This is the filename of the plug-in that is installed in the Modules folder of the FrameMaker installation. If you change the name of the plug-in file, you must use the new name you have chosen.

Scripting examples

The following examples show how to call commands in Paragraph Tools from FrameScript and the FDK.

FrameScript

To control Paragraph Tools with FrameScript, you will use the CALLCLIENT command. Be sure that you use the appropriate client name for the platform on which you are using FrameMaker.

The following example shows how to use the CALLCLIENT command on Windows to list paragraph usage for the current document.

```
CALLCLIENT FrameClient('Paragraph Tools')
Message('ListParagraphUsage') ReturnVal(retVar);
```

The following example shows how to use the CALLCLIENT command on the Macintosh to remove overrides for the files in the current book.

```
CALLCLIENT FrameClient('ParagraphTools')
Message('RemoveOverridesBook') ReturnVal(retVar);
```

Refer to the FrameScript documentation for more information about the CALLCLIENT command.
**FDK**

To control Paragraph Tools with the FDK, you will use the `F_ApiCallClient()` function. Be sure that you use the appropriate client name for the platform on which you are using FrameMaker.

The following example shows how the `F_ApiCallClient()` function is used on Windows to find the next paragraph override in a document.

```c
F_ApiCallClient("Paragraph Tools", "FindNextOverride");
```

The following example shows how the `F_ApiCallClient()` function is used on the Macintosh to remove overrides for the current document.

```c
F_ApiCallClient("ParagraphTools", "RemoveOverrides");
```

**Background processing**

If you will be running scripts with FrameMaker in the background, you must use an additional command to specify which document or book will be acted on. Do this using the `SetDocId` or `SetBookId` commands.

*It's necessary to use these commands only if scripts will be running while FrameMaker is in the background and is not the active application.*

**Syntax**

Like other scripting commands, the `SetDocId` and `SetBookId` commands are string values. The command is followed by a space and then the string representation of the document Id or book Id. For instance, the following command specifies the document with the Id 12345:

```c
SetDocId 12345
```

**Scope**

The `SetDocId` and `SetBookId` commands specify which document or book the next command will affect. After the next command has been run, the scope is reset, meaning that subsequent commands will affect the currently-active document or book. If you want to perform several commands in succession, each command must be preceded by a `SetDocId` or `SetBookId` command.
Script example

The following code for the FDK uses the `SetDocId` command to specify the document that will be affected by the next script command that is run. Notice that a document Id is converted to a string representation and included in the command.

```c
StringT s = NULL;
docId = ( The Id of the document to be affected )
s = F_StrCopyString("SetDocId ");
s = F_Realloc(s, F_StrLen(s)+(IntT)10, NO_DSE);
F_StrCatIntN(s, docId, (IntT)10+F_StrLen(s));
F_ApiCallClient("Paragraph Tools", s);
F_ApiCallClient("Paragraph Tools", "RemoveOverrides");
```
Appendix D
Registration

Paragraph Tools is shareware, so you can try the software before you purchase it. The software is fully functional. As you evaluate the software, you will see periodic “reminder” messages indicating the software hasn’t been registered. If you find Paragraph Tools useful, we encourage you to pay the registration fee.

License types

The following types of licenses are available for Paragraph Tools:

**Single-user license**
Each single-user license allows you to use one copy of the software on one computer. If you have fewer than 10 users, it’s most cost-effective to purchase single-user licenses.

**Site license**
A site license allows you to use copies of the software on any machine on the site. A site is defined as an area within a 100 mile radius. It’s most cost-effective to purchase a site license if you have 10 or more users.

**Worldwide license**
A worldwide license allows you to use copies of the software on any machine within the organization, regardless of where the installations are located. It’s most cost-effective to purchase a worldwide license if you have 10 or more sites where the software will be used.
Registration methods

Silicon Prairie uses Kagi, an online payment processing service. To learn more about Kagi, visit them on the web at http://www.kagi.com. You can pay using the following methods:

Online

You can purchase a license online through the Silicon Prairie web site (http://www.siliconprairiesoftware.com). There you will find a secure link to the Silicon Prairie page on the Kagi web site. This is the easiest and fastest way to obtain a license.

Direct purchase

If you don’t want to purchase online, you can contact Silicon Prairie Software directly to arrange payment. Contact us via e-mail at support@siliconprairiesoftware.com.

Registration code

When you register the software, you will receive your registration code through e-mail. Save this e-mail! You will need it if you need to reinstall the software. If you printed this documentation, write the registration code here:

Registration Code: ______________________________________

To apply the code, choose the Register menu option via the Tools menu.

To properly save the registration code, you must have privileges to write to the directories used for the FrameMaker installation. For Windows XP and earlier, this means being logged into the system as a member of the Administrator or Power User groups. For Windows Vista with User Account Control (UAC) this means running FrameMaker with Administrator credentials. You need to do this only for the session in which you register the plug-in.

Enter the registration code you received in the dialog that’s displayed.
